Faculty: Prof Narayan Janakiraman  
201 College of Business  
janakira@uta.edu  
Office hours by appointment most days  
Teaching Assistant: Han (Anna) Ma - ma.han@mavs.uta.edu  

REQUIRED READINGS  
1. https://cb.hbsp.harvard.edu/cbmp/access/38925519  
2. Other material will be available at the course website on Blackboard  

COURSE OBJECTIVES AND FORMAT  
The course will aim to equip students with skills to take up a career in product design and management if they choose a creative path or in dealing with product strategy issues if they choose a managerial career. In this regard the key objectives are to help  

1. Learn tools and methods for product design and development. (DESIGN)  
2. Increase confidence in student abilities to create a new product. (DESIGN)  
3. Bring awareness of the role of multiple functions in creating a new product (e.g. marketing, finance, industrial design, engineering, production). (DESIGN)  
4. Deeply think about strategic management issues in managing products during their growth, maturity and decline stages. (STRATEGY)  
5. Manage multiple products either as product lines or as product extensions (STRATEGY)  
6. Learn how products become brands (STRATEGY)  

All the course lectures will be labeled as product design related or product and brand strategy related lectures.  

Co-creating knowledge. Unlike some courses you may have taken that were primarily "lecture-driven," this course is highly interactive and therefore requires your active participation during each session. To encourage your involvement and to help me get to know you by name, please be sure to have a "name card" with your first name on your desk at the start of each class. (Just fold a piece of paper length wise, and use a dark marker to print your first name on both sides of the tent card in big, bold letters so those in front of you and behind you can read your name).  

Creative Thinking. There will be various creative exercises that students will be a part of, some of which will be individual exercises and some will be group exercises. Students will be encouraged to think ‘out of the box’ on new product ideas. Some of the creative exercises that we will work on are  

1. A fruit and vegetable race in class (DESIGN)
2. Creating Chindogus (DESIGN)
3. Product Poker (STRATEGY)

Academia meets practice. In order to help bring product design and product strategy closer to students, there will be various external experts who will be brought in to help reinforce some of the concepts taught in the course.

Real life projects. Students will work on a project that will be done with 3 group members. The team will draw product designs, create prototypes and work on a viable marketing strategy for the product.

Marketing Engineering. Lectures and cases will try and reinforce a few key cutting edge marketing techniques that could be very useful if you choose a career in product management, marketing or general management. Some of the techniques that you will learn are

1. Forecasting using regression and forecasting for new products using the BASS MODEL (STRATEGY)
2. Quantitative focus groups using Information Pump technique (DESIGN)
3. Conjoint Analysis to create new products and to find market shares from introducing new products (DESIGN & STRATEGY)
4. Elaboration Likelihood Model to create ads for products (DESIGN)
5. Functional Decomposition Method to learn new product creation (DESIGN)
6. ASSESSOR Model that is used by leading market research firms to provide inputs on product launch (STRATEGY)

More information on specific readings and the expected output in each class session is provided in the CLASSROOM SCHEDULE and PROJECT SCHEDULE pages that follow.

---

**GRADING FORMAT**

Numerous opportunities are provided throughout the semester for demonstrating how well you understand the material. It is assumed that each student will meet from time to time with the instructor to assure that all materials are understood and that any questions or other issues are satisfactorily addressed. This is particularly encouraged to discuss questions or topics of personal interest, such as new product ideas you may have, or career-related issues in product management, or related areas.

Grades will be based on 4 areas of performance:

- A. CLASS PARTICIPATION (includes case discussions) 25%
- B. ASSIGNMENTS 25%
- C. FINAL EXAM (MULTIPLE CASES) 25%
- D. PRODUCT PROTOTYPING PROJECT 25%

Grades will be updated on blackboard on a weekly basis i.e. Friday of each week.
Grading Component 1 - Class Participation. Includes attendance, preparation, and discussion during lectures and cases. Quality is more important than quantity. High quality contributions to class discussions (1) are concise and to the point, (2) build on group analyses and insights, (3) reveal thought and preparation prior to class, and (4) challenge the views of others without being derogatory. Class participation scores will range from 0 to 3 with 0=no show, 1=show up to class but do not contribute, 2=show up and make minimal contribution and 3=show up to class and make substantive contributions to the discussion.

Grading Component 2 - Assignments. There will be four assignments during the semester. All assignments are individual assignments and will not be re-administered if not submitted on the due date. Each assignment will be graded on a 20 point scale with 1 being minimum and 20 being the maximum.

Grading Component 3 – Final Exam. The final exam will be a take home case analysis. Two to three cases will be given the last day of class. Questions will be based on these cases.

Grading Component 4 - New Product Concept Project. Your group will generate an idea for a new product for the consumer market. The idea should be one that you think is important, feasible, and useful but also simple. The teams will be responsible for drawing up concepts and preliminary rough prototypes of the product. More important will be conducting consumer research to suggest product strategy, marketing strategy and brand strategy for launch.

In assigning grades for this course, there will be no – curve, which would require that a certain percentage of students receive As, Bs, etc. Instead, the grading policy of this course is a flexible one, which does not pit students against each other. Accordingly, the distribution of grades will reflect the actual performance of students, with as many (or as few) students receiving grades of As as their actual performance dictates. Expect a good grade only if you do all the work carefully, thoughtfully, thoroughly and punctually. Top grades are reserved for demonstrated academic excellence. Typically after aggregating across the four grading components the aggregate score will be standardized to 100%, based on which grades will be assigned as stated below:

A = 90-100%  
B = 80-89.99%  
C = 70-79.99%  
D = 60-69.99%

MISCELLANEOUS ISSUES

Punctuality: As you would expect your professors to arrive on time, I expect you to arrive on time. I think it is very rude to continually arrive late—not only do you disrupt lecture by entering late, but you also create unnecessary commotion in trying to get yourself to an empty seat. You will also be missing valuable class notes as well as important announcements. If you have a valid reason for arriving late (e.g., job interview, doctor’s appointment, etc.), slip in as quietly as you can and take the closest empty seat.
Absolutely no late work will be accepted. Please staple all pages of a given assignment. Please do not paper clip or “dog ear” your assignments. In the event of printer failure (by way of an ink deficiency or other catastrophic reason), please email me your file ahead of class time (at least half hour before class begins).

Attendance: Treat this class as you would any other professional obligation. When you accept a job, you make a commitment to attend work regularly. When you register for this course, you make a similar commitment to attend class regularly. I understand that situations may arise where you may not be able to attend class. If for some reason you have to miss class, you must inform me prior to the missed class period. Not informing me of absences from class is comparable to missing work without informing your manager. Such behavior reflects a lack of commitment and professionalism. Repeated uninformed absences will result in a lowered final grade. Maximum number of excused absences for job interviews is one—please plan accordingly. Simply email me prior to the class meeting to inform me that you will be missing class for a job interview.

Laptop computer use is not permitted during class time. The lectures for a given day have been prepared ahead of time and you are highly encouraged to download the lecture notes to bring to class. There should therefore be no reason to take copious amounts of notes during class.

Special Accommodations: If you have any condition, such as a physical or learning disability, which will make it difficult for you to carry out the work as outlined, or which will require academic accommodations, please notify me during the first week of the course so that you are appropriately accommodated.

Academic Integrity and Dishonesty: If you remain enrolled in this course, you are indicating to the Professor that you have read, understand, and accept the University policies and procedures regarding academic integrity and dishonesty.

College of Business/University Policies

Drop Policy: Students may drop or swap (adding and dropping a class concurrently) classes through self-service in MyMav from the beginning of the registration period through the late registration period. After the late registration period, students must see their academic advisor to drop a class or withdraw. Undeclared students must see an advisor in the University Advising Center. Drops can continue through a point two-thirds of the way through the term or session. It is the student's responsibility to officially withdraw if they do not plan to attend after registering. Students will not be automatically dropped for non-attendance. Repayment of certain types of financial aid administered through the University may be required as the result of dropping classes or withdrawing. Contact the Financial Aid Office for more information.

Americans With Disabilities Act: The University of Texas at Arlington is on record as being committed to both the spirit and letter of all federal equal opportunity legislation, including the Americans with Disabilities Act (ADA). All instructors at UT Arlington
are required by law to provide "reasonable accommodations" to students with disabilities, so as not to discriminate on the basis of that disability. Any student requiring an accommodation for this course must provide the instructor with official documentation in the form of a letter certified by the staff in the Office for Students with Disabilities, University Hall 102. Only those students who have officially documented a need for an accommodation will have their request honored. Information regarding diagnostic criteria and policies for obtaining disability-based academic accommodations can be found at www.uta.edu/disability or by calling the Office for Students with Disabilities at (817) 272-3364.

**Academic Integrity:** It is the philosophy of The University of Texas at Arlington that academic dishonesty is a completely unacceptable mode of conduct and will not be tolerated in any form. All persons involved in academic dishonesty will be disciplined in accordance with University regulations and procedures. Discipline may include suspension or expulsion from the University. According to the UT System Regents’ Rule 50101, §2.2, "Scholastic dishonesty includes but is not limited to cheating, plagiarism, collusion, the submission for credit of any work or materials that are attributable in whole or in part to another person, taking an examination for another person, any act designed to give unfair advantage to a student or the attempt to commit such acts."

**Student Support Services Available:** The University of Texas at Arlington provides a variety of resources and programs designed to help students develop academic skills, deal with personal situations, and better understand concepts and information related to their courses. These resources include tutoring, major-based learning centers, developmental education, advising and mentoring, personal counseling, and federally funded programs. For individualized referrals to resources for any reason, students may contact the Maverick Resource Hotline at 817-272-6107 or visit www.uta.edu/resources for more information.

**Electronic Communication Policy:** The University of Texas at Arlington has adopted the University “MavMail” address as the sole official means of communication with students. MavMail is used to remind students of important deadlines, advertise events and activities, and permit the University to conduct official transactions exclusively by electronic means. For example, important information concerning registration, financial aid, payment of bills, and graduation are now sent to students through the MavMail system. All students are assigned a MavMail account. Students are responsible for checking their MavMail regularly. Information about activating and using MavMail is available at http://www.uta.edu/oit/email/. There is no additional charge to students for using this account, and it remains active even after they graduate from UT Arlington.

**Final Review Week:** A period of five class days prior to the first day of final examinations in the long sessions shall be designated as Final Review Week. The purpose of this week is to allow students sufficient time to prepare for final examinations. During this week, there shall be no scheduled activities such as required field trips or performances; and no instructor shall assign any themes, research problems or exercises of similar scope that have a completion date during or following this week unless specified in the class syllabus. During Final Review Week, an instructor shall not give any examinations constituting 10% or more of the final grade,
except makeup tests and laboratory examinations. In addition, no instructor shall give any portion of the final examination during Final Review Week. Classes are held as scheduled during this week and lectures and presentations may be given.

**Policy on Nonpayment Cancellations:** Students who have not paid by the census date and are dropped for non-payment cannot receive a grade for the course in any circumstances. Therefore, a student dropped for non-payment who continues to attend the course will not receive a grade for the course. Emergency loans are available to help students pay tuition and fees. Students can apply for emergency loans by going to the Emergency Tuition Loan Distribution Center at E. H. Hereford University Center.

**Textbook Purchases:** Textbooks should be purchased by Census Date. The bookstore policy is to return any unsold textbooks to the publisher after this date.

**COBA Policy on Bomb Threats:** Section 22.07 of the Texas Criminal Law states that a Class A misdemeanor is punishable by (1) a fine not to exceed $4,000, (2) a jail term of not more than one year, or (3) both such a fine and confinement. If anyone is tempted to call in a bomb threat, be aware that UTA has the technology to trace phone calls. Every effort will be made to avoid cancellation of presentation/tests caused by bomb threats to the Business Building. Unannounced alternate sites will be available for these classes. If a student who has a class with a scheduled test or presentation arrives and the building has been closed due to a bomb threat, the student should immediately check for the alternate class site notice which will be posted on/near the main doors on the south side of the Business building. If the bomb threat is received while class is in session, your instructor will ask you to leave the building and reconvene at another location. *Students who provide information leading to the successful prosecution of anyone making a bomb threat will receive one semester's free parking in the Maverick Garage across from the Business Building.* UTA's Crimestoppers may provide a reward to anyone providing information leading to an arrest. To make an anonymous report, call 817-272-3381.

**COBA Policy on Food/Drink in Classrooms:** College policy prohibits food and/or drinks in classrooms and labs. Anyone bringing food and/or drinks into a classroom or lab will be required to remove such items, as directed by class instructor or lab supervisor.

**Evacuation Procedures:** In the event of an evacuation of the College of Business building, when the fire alarm sounds, everyone must leave the building by the stairs. With the fire alarm system we now have, the elevators will all go to the first floor and stay there until the system is turned off. All those in the North tower side of the building should proceed to the fire escape stairwell located on the East and West sides of that wing.

For disabled persons: please go to the Northeast fire stairs. We have an evacuation track chair located on the 6th floor stairwell. We have people trained in the use of this chair and there will be someone who will go to the 6th floor to get the chair and bring it to any lower floor stairwell to assist disabled persons. Faculty members will notify the Dean’s Office at the beginning of each semester of any disabled persons in their classes. Should this be a real emergency, the Arlington Fire Department and UTA Police will also be here to help.

PURPOSE
The purpose of this team exercise is threefold. First, this exercise will allow you (and your group) to design and build a relatively simple "product." Second, you will have an opportunity to exercise your creativity both individually and in your group. Finally, this exercise will give you hands-on experience in relating product specifications to desired outcomes. Be prepared to test/demonstrate the results of your project in class. To the winner go the spoils (and leftover fruit/vegetable salad)!

ASSIGNMENT
Objective:
To design a stylish, inexpensive (yet nutritious) vehicle made (mostly) from fruits and vegetables that will safely transport a small "passenger" great distances. This vehicle will be entered into the KF 500 competition.

KF 500 VEHICLE ENTRY:
Before visiting a supermarket to either examine or purchase vehicle components, each team should think about a set of target product specifications for their vehicle (product specifications include a metric and a value). For example, “weight” is a metric, whereas “less than 2 ounces” is a value of this metric. Each team will want to carefully consider how each product spec relates to a desired objective. For example, basic physics laws suggest that heavier objects moving down an inclined plane will travel farther than lighter objects. At a minimum you will want to consider product specifications for “great distances,” “stylish,” “inexpensive,” “nutritious,” and “safely.” The general competition rules are below.

As you work on this exercise, please think about the following questions. Be prepared to discuss your observations and the outcome of your design efforts in class.

1. How did your team establish its target product specifications? (Were these formal or informal?)
2. What are the product specs of your team’s final entry? (How do these product specs relate to each other?)
3. What was the process your team used to arrive at its vehicle?
4. What were the major components, or steps, in this process?
5. Did everyone always agree on what to do next? If there was disagreement, did you all do one thing, or were there multiple activities going on at once? How did this affect the process? Did the process occur in a linear fashion (A-B-CD), or did you revisit some of the steps more than once (A-B-A-C-D-B-C-D-A-D)?
6. How often did you reread the assignment?
7. If your team were given a similar problem again, what would you do differently; what would you change, eliminate? What part of the process would you try to augment, reinforce?
Each team will demonstrate their vehicle in class on Oct 14, 2015

**The Fruit/Vegetable Team Vehicle Competition Rules**

**DESIGN PARAMETERS:**

1. The vehicle will be constructed "mostly" from fruits and vegetables. By "mostly" I mean that certain small pieces of other materials may be used in or on your vehicle together, but most of your vehicle should be made of fruits and vegetables. Additional "power aids" may not be used. (Example: rubber bands, batteries, C02 cartridges, etc.) Think of this vehicle as being entered in a soapbox derby for fruit/vegetable vehicles.

2. By definition, a vehicle is "any device with wheels or runners used to carry something, as a car, bus, bicycle or sled." Devices without wheels or runners are excluded (e.g., simply entering a honeydew melon is not allowed).

3. The "passenger" will be provided to you in class in sufficient time to allow for your design team to incorporate his/her "dimensions" in your vehicle. Assume this passenger will be the size of a Lego or Playmobil person.

**DEMONSTRATION RULES:**

1. Forward momentum will be provided via an inclined plane (i.e., "road") at an appropriate angle. The instructor will bring the official "road".

2. To start the vehicle, it will be set at the top of the "road" and released.

3. Each vehicle will run at least once and the distance the "passenger" is "safely" transported (without being "injured") will be recorded.
ASSIGNMENTS

ASSIGNMENT 1
Due: Oct 7, 2015  Individual page limit: 5  Max Points: 20

1. Imagine that you have been newly recruited as a product manager by Vonage – the internet telephone company. Vonage has been toying with the idea of Video Phones for a long time and are looking to see if they can develop a product to successfully capture a piece of the video conferencing/chat market. While scouting around you realize that the competition is two fold - current chat softwares e.g. Google/Skype etc that offer webcam facility at no charge and other video phones that charge a one time fee for purchase of the instrument. You think that Vonage with its expertise in broadband communications might be able to adopt a different business model i.e. offer a video phone instrument for a nominal charge or for free and then charge a monthly fee for product usage. Further, R&D tells you that they have already developed the right instrument (a cheap but effective video phone).

Your job now is to find out if Vonage should launch a video phone and if yes, who should this product target. Define

a) How you would determine whether or not to launch the product?

b) What study would you commission to determine the segment that Vonage should target with its new video phone and to determine their NEEDS? State precisely the market research process i.e. the different studies you would conduct, the questions you would ask in each study, the analysis you would conduct and the kind of output you expect.

2. Find below a quick review of a few tires on consumer reports. If you want to know how to use excel to run regression please go to the following website for an excellent simple example..

a. Run a regression of price as a function of the various attributes. Report the preference order of the attributes.

b. Run a regression of overall score (consumer preference) as a function of the various attributes. Report the preference order of the attributes.

c. Why are the two preference orders different?

d. Create a competitive map of the various products with product price on the Y axis and the key product attribute identified using regression a. For example if you identified braking as the attribute above you would plot all the products on a price by braking map.

e. Use the map to see if you can suggest a new product idea.
3. Underarm crutches is a product category that has seen very little innovation. See photograph below for one such crutch.

Use the functional decomposition method and draw a flow chart of the various functions identified. Now create a new product concept for an underarm crutch.
4. Draw a House of Quality for the iPad. Complete the house of quality to the
degree possible ignoring the more technical attributes/information. (Note: This
question was excluded, since we had not completed House of Quality. We will
however include it later in the semester, once we have had a chance to go over
House of Quality in a future lecture)

ASSIGNMENT 2
Due: Oct 21, 2015  Individual page limit: 5  Max Points: 20

1. Imagine that you have been newly recruited as a product research manager at the
University of Texas at Arlington. They have been toying with the idea of
launching a product kit for testing the GENALOGY of pets, especially the “dog
as a pet” market. Technology is now available to be able to draw out the DNA of
the dogs through a small sample of saliva. With the DNA almost all details of the
dog can be obtained. However unlike the human genographic project on National
Geographic (google to find out more about it), a database doesn’t exist that would
help type not just the ancestry of the pet but also how it is related to other pets as
well. Before embarking on creating a large database, you are wondering about the
following:

a. What market segments exist for this market? Define precisely by variables
   and your logic and secondary data that suggests the same.
b. Calculate the total market potential “M” across the various market segments.
c. Identify “p” and “q” that you think apply to this market for a Bass Model.
   Remember even exhaustive search won’t give you exact markets elsewhere,
   so use your best judgment.
d. Calculate yearly sales for the first 5 years based on the M, p and q assumed.

2. Create a new product concept for a new brand of watch.

a. Explain your concept by describing the market segment it appeals to along
   with a description of the product features and consumer benefits.
b. How would you test the concept? Please write and attach a concept testing
   survey instrument.

ASSIGNMENT 3
Due: Nov 2, 2015  Individual page limit: 5  Max Points: 20

For the Genealogy for pets project:

a) Identify attributes and levels for a possible conjoint design for the product
   concept.
b) Using the conjoint excel spreadsheet provided, collect data from 4 potential consumers and determine attribute importance and best product to design.

c) Draw up a preliminary website site that could be used to manage the database and to be able to disburse it to the target consumer segment (dog owners). So what you will need to provide is the home page of the website and a few of the key pages. You don’t need to create an actual webpage but just how it look on paper. So use three pages of this assignment with one page for homepage visual and two pages for detailed look at the webpage.

ASSIGNMENT 4

Due: Nov 16, 2015  Individual page limit: 5  Max Points: 20

For the Geneology for pets project:

a) Suggest a way to conduct simulated test marketing for the same (provide detailed procedure of steps, expected outlook, and do some artificial calculations based on how you think it will pan out). Refer to the Nestle Contadina Case and see how BASES estimated volumes based on trial/repeat etc. In this case parts of the product could be trial (base product) and extra knowledge or features can be set for repeat. So one could know about basic DNA effects in trial, and paying more for Health Hazards could be a repeat business model.

b) Assume that the product is going to be shipped to the consumer from your retail location and will need to be self sufficient for the consumer to know about the product and use it on their own. Design packaging (photos/visuals/writeup etc) that you are likely to send the product in.

c) What channels will you suggest they sell it at? Also explain how you will solve the DOUBLE MARGINALIZATION problem for this product if selling through multiple channels.
CASE STUDIES

BRAUN AG: Product design and development for a new oral category
HBS: DMI006
Due: Sept 21, 2015 Individual page limit: 3

Analyze the case and submit case analysis before class begins. Here are questions to consider while analyzing the case. (Note: You don’t need to answer these questions, but these are just for you to think about issues of the case)

1. What kind of company is Braun? What are its values? How do you characterize its product development process?
2. What is the role of design in the firm? What do you attribute’s the company and product’s success to?
3. What is the problem in the case? What is the company trying to do? What is the crisis?
4. What do you think are the challenges that Valiaho faces? How real is the competitive threat?
5. What are some of the design issues and decision challenges to be made?
6. What should their product strategy be and why?

Zenith: Marketing Research for High Definition Television (HDTV)
HBS: 9-591-025
Due: Oct 7, 2015 Individual page limit: 3

Analyze the case and submit case analysis before class begins. Here are questions to consider while analyzing the case. (Note: You don’t need to answer these questions, but these are just for you to think about issues of the case)

1. Think about the process of forecasting adopted by Zenith.
2. What’s your critique of the forecasting technique? Think of the pros and cons of the forecasting method.
3. Your critique of the various alternative proposals for HDTV marketing research techniques.

Nestle Refrigerated Foods: Contadina Pasta and Pizza (A)
HBS: 9-595-035
Due: Oct 28, 2015 Individual page limit: 3

Analyze the case and submit case analysis before class begins. Here are questions to consider while analyzing the case. (Note: You don’t need to answer these questions, but these are just for you to think about issues of the case)
1. In general, how would you compare the pizza opportunity to the pasta opportunity? Why was pasta so successful? Do you recommend launching a pizza product? If so, which one?

2. Use the BASES model in Exhibit 9 (and the attached step-by-step exercise), to forecast the estimated demand (trial & repeat) for the two pizza options under consideration: Pizza & Toppings and Pizza Only. Most of the data needed are in Table D and Exhibit 21.

ROHM & HAAS (A)
HBS: 9-587-055
Due: Dec 7, 2015 Individual page limit: 3

Analyze the case and submit case analysis before class begins. Here are questions to consider while analyzing the case. (Note: You don’t need to answer these questions, but these are just for you to think about issues of the case)

1. What should Joan Macey do? With respect to pricing importantly?
2. What is the appropriate strategy for marketing Kathon MWX?
3. What is the role of formulators in taking the product to customers?
4. What role can the supplier play in developing the market?
5. What factors led to the failure of Kathon MWX? On the other hand, why was Kathon 886 MW successful?
6. How should Joan Macey implement her plan of action?
PRODUCT PROTOTYPE PROJECT

Your group will generate an idea for a new product for the consumer market. The idea should be one that you think is important, feasible, and useful but also simple. The teams will be responsible for developing the concepts and testing them. Please work with the faculty and TA to select the ideas and to then design the testing methods. Using data from market feedback the teams will prepare and present the consumer research findings as part of a project presentation to potential investors. This project requires initiative, planning, good group process, creativity, and a willingness to experiment. It is not a trivial task. Only a small percentage of our population is able to introduce a new product, and a large percentage of them do it poorly. You do not need to get the product design part absolutely correct, just a good concept and a preliminary prototype is possible. Then concentrate on the marketing and branding strategy to ensure that product can be launched and managed well.

The first progress presentation on Sept 28/30 your team will present (Each team will have 10 minutes to present)

   a) Key consumer insight on unmet consumer need
   b) Product idea that will meet unmet consumer need
   c) Present your initial product design sketch plus initial prototype
   d) Likely Market size for your product idea

The second progress presentation on Nov 2/4 your team will present (Each team will have 10 minutes to present)

   a) Second prototype
   b) Clear definition of who the consumer segment for the product is
   c) A survey questionnaire on how you are likely to get feedback on your product idea from the consumer segment
   d) The likely output

The final presentation on Nov 30/Dec1 your team should cover the following for the product idea so chosen (Each team will have 25 minutes to present)

   a) Clear forecast volumes and market share estimates
   b) Final product design ideas
   c) Final prototypes for the product
   d) Consumer research findings including a concept test
   e) Marketing strategy for product launch including - Channel, advertising, packing and brand strategy for the new product
FINAL PRESENTATION
Peer Evaluation Form

Your name: ________________________________

For your presentation please allocate 100 points across you’re the various team members in your group indicating their input to the project. So if there are four people in a project the most likely numbers are 25 for each member etc.

Name              Points
1.                 
2.                 
3.                 
4.                 
5.                 
6                 

Explain your rationale
